

Frontendtest

Instructions for Digitalist Front-end test.

You should create a landing page according to the attached design sketch.

We also have a user case that we would like to see you solve.

Our customer wants a menu and a search box that is displayed in a nice way when you click on the respective icon. Unfortunately, we do not have time to deliver a design sketch for this and therefore have given you free hands to create a concept for what the menu and search box could look like.

Requirements specification:

1. According to design
2. The menu structure should have two levels
3. Responsive

We would prefer to see you to use SASS (SCSS, which we use at Digitalist) and some form of CSS methodology. Otherwise you can choose which techniques you want to use, we do not put value in it but will first and foremost look at how well written the code is.

Good luck!
